

SD WORX CHALLENGE · 30 SEPTEMBER 2026

A library with no librarian

Find it. Understand it. Trust it.

OUR CONCEPT

Passport

Today a passport is a form someone fills in once.

Ours reads every linked source and **shows why you can trust it, or can't.**

Knowledge passport [Passport](#) Sources Stamps

v1.2

Global Payroll Harmonisation

Trust: orange

Passport

Issued by	Lotte Beke, Jan 2026
Owner	Jane De Smet
Last updated	12 Sep 2026
Last verified	02 Jun 2026
Expires	31 Dec 2026
Visa	BE NL FR DE ES +12

Why orange

- ✓ Owner active, in scope
- ⚠ Go-live conflict: plan says 1 Nov, Teams says 15 Nov
- ⚠ Updated in Sep, but not verified since Jun
- 👤 Sent to Jane De Smet to resolve

Linked sources

Plan: green

Confluence: green

Teams: orange

SharePoint: red

DATA SOURCES

Four shelves, no catalogue

Documents

Policies, manuals,
procedures, checklists

Chats

Teams channels, emails,
shared files

Apps

Operational data,
workflows, exports

Heads

What experts know but
never wrote down

Every item on every shelf gets a passport. **Today, none of them has one.**

UNDER THE HOOD

RAG is the engine

RAG is a fast librarian who fetches every book. **We add the stamp that says which book to trust.**

WHAT MAKES KNOWLEDGE TRUSTWORTHY

Four questions at the border

Is it current?

Freshness: last verified,
expiry date

Does it apply?

Scope: country,
client, module

Who stands behind it?

Issuer, owner, source type

Does it hold up?

Agreement with other
sources, usage

Green: all four pass

Orange: one is unsure

Red: one clearly fails

Where each signal can fool us

Signal	How it misleads	Our safeguard
Freshness	A recent edit isn't proof; old isn't wrong	Track verified date; law changes expire it
Issuer, owner	People move on; seniority ≠ accuracy	Ownership by role, reassigned on leave
Source type	Policies age; chats hold the latest fix	A tiebreaker, never the verdict
Scope	Country and client tags are often missing	Unknown scope shows orange, asks owner
Agreement	Ten copies of one error look like consensus	Count independent sources, merge duplicates
Usage	Popular isn't correct; people skip feedback	"This was wrong" outweighs likes

No signal decides alone. **The light combines them and shows its reasons.**

WHY PEOPLE WILL KEEP IT ALIVE

A garden, not a monument

Only when needed

Owners act when a conflict or expiry rings, not on a schedule

One click to fix

Both versions side by side; the pick becomes the answer for everyone

Credit where due

Experts are named on the answers they verified

Honest doubt

"Partly verified, ask X" beats a confident black box

Knowledge stays healthy when tending it is **small, rare and rewarded.**

Four maps, four different routes

A payroll consultant needs an answer for a client **now**. The AI assistant finds three documents, then a colleague shares a Teams chat.

No owner

Who stands behind it?

Just edited

Newer, but is it right?

Other country?

Maybe not our rules

Teams chat

Says something else

She found something. **She can't tell why she should rely on it.**

Passing the baton, and dropping it

A payroll consultant takes over a client from a colleague.

2010

One document to read

One hour of talking

2026

Still... the same?

History, quirks and past decisions stay in one person's head

Sixteen years later, the baton is still a single document.

THE CHALLENGE

How might we turn fragmented organisational knowledge into a trusted shared resource?

Find it

Understand it

Trust it

Choose one meaningful problem. You do not need to solve everything.

WHY IT HAPPENS

Milk without a best-before date

No owner

The library has no librarian

No freshness

"Edited recently" is not the same as "still correct"

No scope

A Belgian rule turns up for a Dutch client

Two truths

The chat corrects the manual; the manual never learns

In our heads

Knowledge walks out when people change roles

WHO WE'RE SOLVING FOR

SD Worx: the backbone of European work

100+

countries of
payroll reach

100k+

customers

10k+

employees

6M+

payslips

A city with a hundred districts, each with its own rulebook. Scale creates expertise, and makes it harder to navigate.

POSSIBLE DIRECTIONS

Four doors into the problem

Trust

A best-before label: is this still reliable?

Capture

A net for the wisdom lost in chats and heads

Detect

A smoke alarm for conflicts, duplicates, gaps and stale facts

Connect

A lighthouse to the right expert

SD Worx: "use these as inspiration, not as a checklist."
